

Aspectos sismológico de los sismos de septiembre de 2017 (Mw8.2, 7.1)

Shri Krishna Singh

Instituto de Geofísica, UNAM

Two extraordinary intraslab earthquakes in Sep 2017 in Mexico

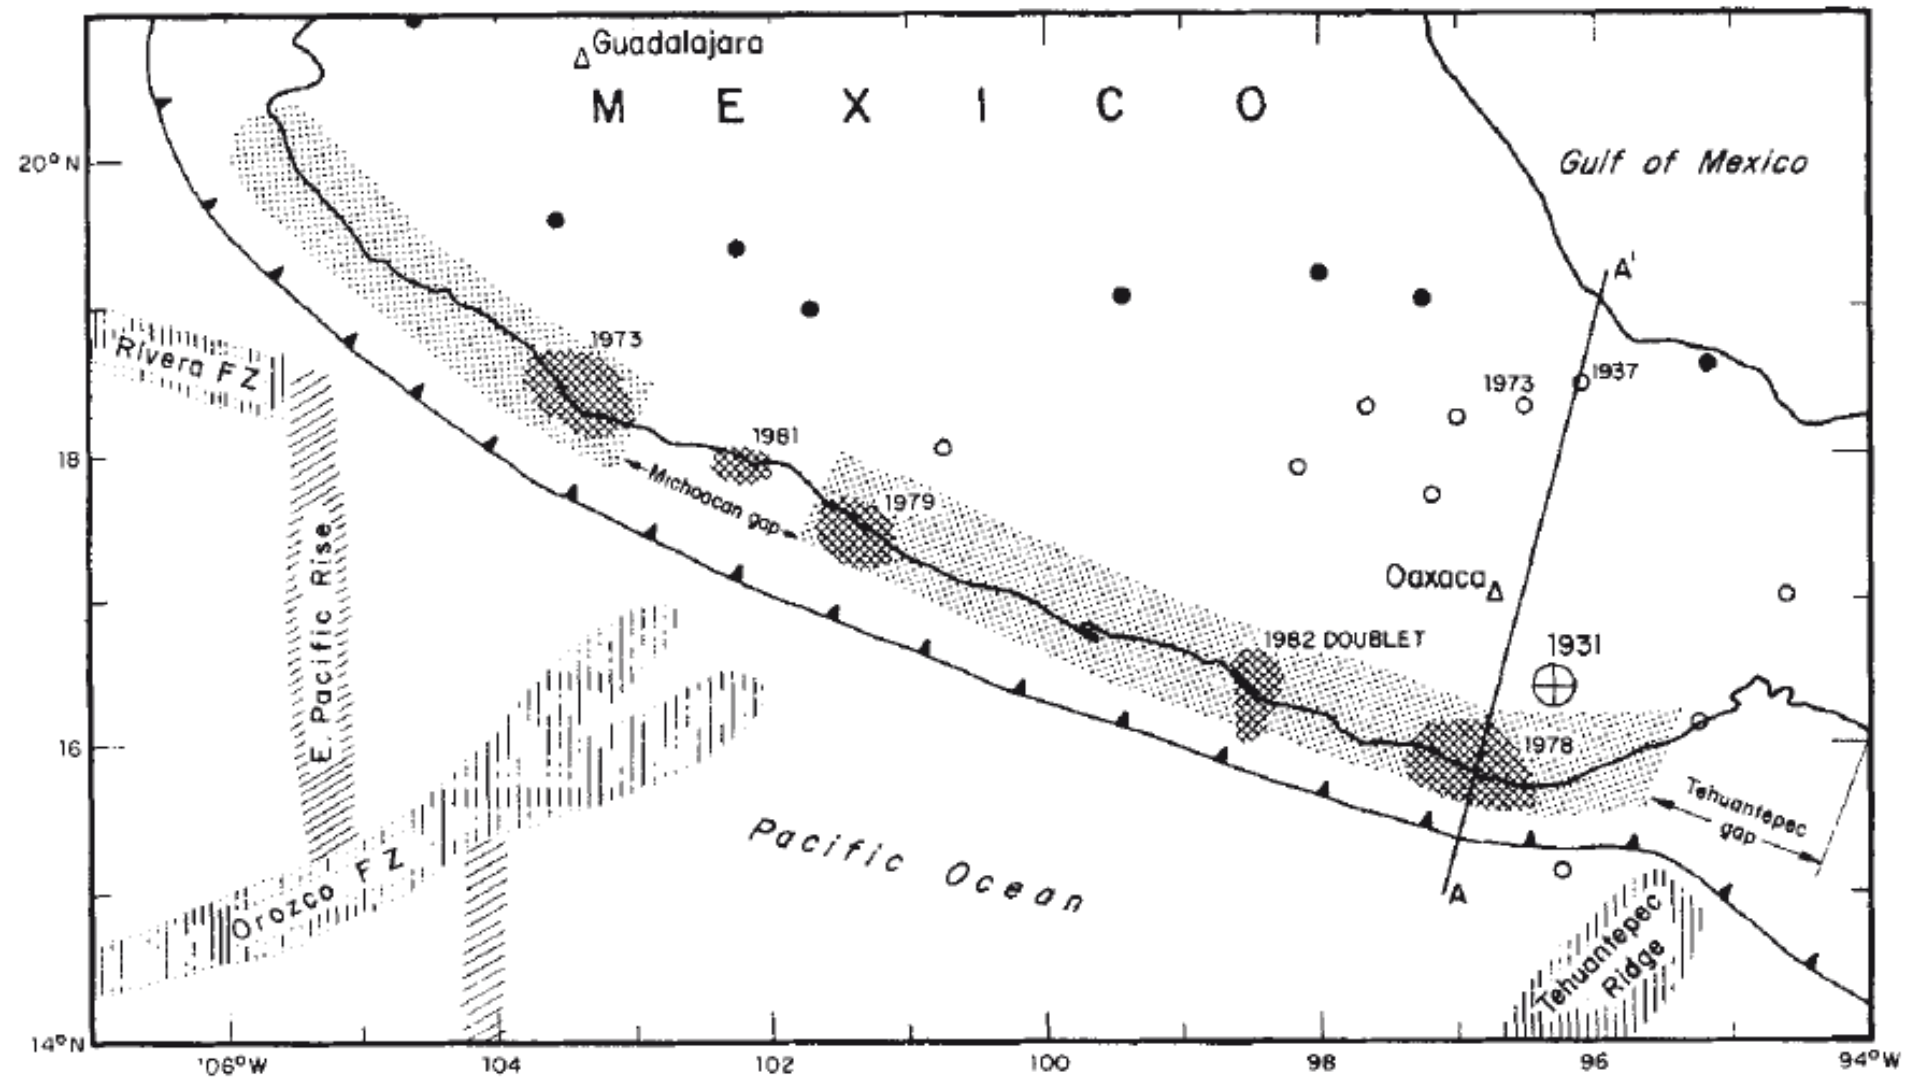

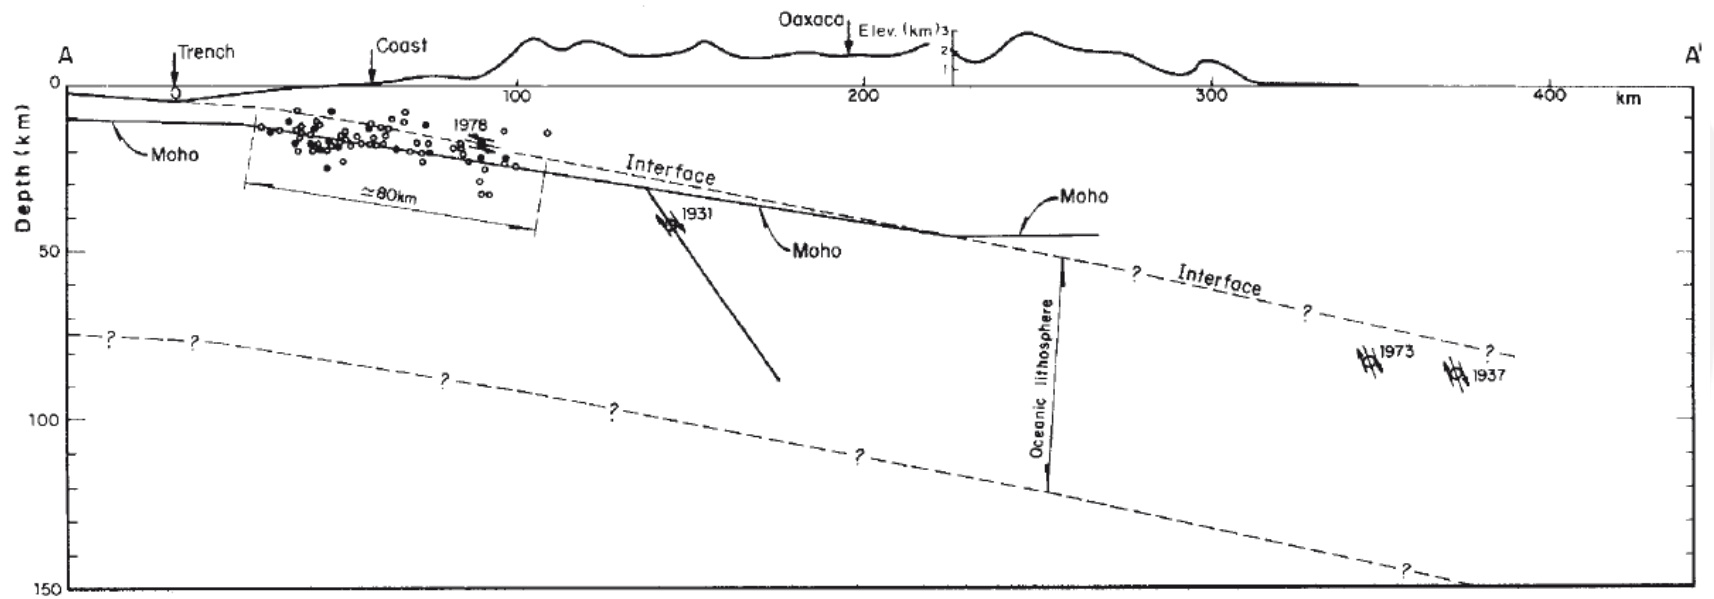

- 8 Sep 2017 (Mw8.2), offshore Tehuantepec, ~700 km from Mexico City (largest recorded earthquake in Mexico ever)
- 19 Sep 2017 (Mw7.1), Morelos-Puebla, 133 km from Mexico City (most damaging intraslab earthquake ever)

- Historically intraslab earthquakes have caused damage to cities in Mexican altiplano (e.g., 1858, 1931, 1973, 1980).

$Er/Mo = 1.6e-5$

Venkataraman & Kanamori, 2004

-
- 19 Sep 2017 (Mw7.1) intraslab earthquake produced highest PGA recorded at CU in Mexico City, twice that recorded during the interplate 1985 (Mw8.0) Michoacán earthquake.
 - These two earthquakes are extreme examples of their type, so far, in terms of ground motion and destruction to the city.

Table 1. Twenty earthquakes with largest recorded A_{max}^* at CU in the period 1964–2012, listed in descending order[†]. Local earthquakes are excluded

| Date | Lat. (°) | Long. (°) | H (km) | M_w | R (km) | A_{max} (gal) | $A_{max}^{HF\#}$ (gal) | Type [§] |
|------------|-------------|--------------|-----------|-------|-----------|--------------------|---------------------------|-------------------|
| 19/09/1985 | 18.14 | −102.71 | 22 | 8.0 | 395 | 29.8 | 5.4 | T |
| 24/10/1980 | 18.03 | −98.27 | 65 | 7.0 | 184 | 24.4 | 17.6 | IS |
| 11/12/2011 | 17.82 | −99.94 | 57 | 6.4 | 194 | 19.2 | 17.0 | IS |
| 14/03/1979 | 17.46 | −101.46 | 25 | 7.4 | 319 | 18.3 | 5.6 | T |
| 06/07/1964 | 18.03 | −100.77 | 55 | 7.3 | 221 | 17.1 | 13.6 | IS |
| 21/09/1985 | 17.62 | −101.82 | 22 | 7.5 | 338 | 13.9 | 5.9 | T |
| 02/08/1968 | 16.25 | −98.08 | 16 | 7.3 | 360 | 13.0 | 3.5 | T |
| 21/07/2000 | 18.11 | −98.97 | 50 | 5.8 | 145 | 12.8 | 8.4 | IS |
| 20/03/2012 | 16.25 | −98.53 | 20 | 7.3 | 348 | 12.0 | 3.4 | T |
| 25/04/1989 | 16.58 | −99.48 | 17 | 6.9 | 307 | 11.9 | 2.2 | T |
| 15/06/1999 | 18.13 | −97.54 | 60 | 6.9 | 225 | 11.6 | 8.3 | IS |
| 07/06/1976 | 17.41 | −100.68 | 57 | 6.4 | 265 | 10.7 | 4.1 | IS |
| 14/09/1995 | 16.48 | −98.76 | 22 | 7.3 | 319 | 10.3 | 3.3 | T |
| 07/06/1982 | 16.25 | −98.34 | 6 | 6.9 | 352 | 9.9 | 4.4 | T |
| 07/06/1982 | 16.32 | −98.45 | 19 | 6.9 | 342 | 9.7 | 2.3 | T |
| 22/05/2009 | 18.10 | −98.43 | 46 | 5.8 | 160 | 8.6 | 5.9 | IS |
| 03/02/1968 | 16.37 | −98.40 | 33 | 5.6 | 339 | 8.6 | 3.1 | T |
| 30/09/1999 | 16.00 | −97.02 | 40 | 7.4 | 433 | 7.8 | 6.6 | IS |
| 29/11/1978 | 16.03 | −96.67 | 23 | 7.8 | 452 | 6.4 | 1.4 | T |
| 23/08/1965 | 16.28 | −96.02 | 12 | 7.5 | 475 | 6.1 | 1.9 | T |

* $A_{max} = [(A_n^2 + A_e^2)/2]^{1/2}$.

[†]Intraslab earthquake of 28 August 1973 (M_w 7.0, $R = 311$ km) is not listed because it was not recorded at CU, probably due to instrumental malfunction. The estimated A_{max} is 9.3 gal (see text).

[#] A_{max}^{HF} : high-frequency A_{max} , computed from the two band-pass filtered (2.5–8.5 Hz) horizontal components.

[§]T: Interplate, IS: Intraslab normal fault.

2017/09/19

H~51 km

R = 133 km

$A_{max} = 59 \text{ cm/s}^2$

Singh et al., 2014

Table 2
Ten Intraslab Earthquakes with Largest Recorded A_{\max} at CU in the Period 1964–2013, Listed in Descending Order*

| Event Number | Date (yyyy/mm/dd) | Latitude (°) | Longitude (°) | H (km) | m_b | M_w | R (km) | A_{\max} (gal) [†] | V_{\max} (cm/s) [†] |
|--------------|-------------------|--------------|---------------|----------|-------|-------|----------|-------------------------------|--------------------------------|
| 1 | 1980/10/24 | 18.03 | −98.27 | 65 | 6.3 | 7.0 | 184 | 24.4 | 3.24 |
| 2 | 2013/06/16 | 18.09 | −99.26 | 56 | 5.9 | 5.9 | 148 | 19.5 | 2.21 |
| 3 | 2011/12/11 | 17.82 | −99.94 | 57 | 6.2 | 6.5 | 194 | 19.2 | 1.40 |
| 4 | 1964/07/06 | 18.03 | −100.74 | 55 | 6.5 | 7.3 | 221 | 17.1 | 1.82 |
| 5 | 2000/07/21 | 18.11 | −98.97 | 50 | 5.4 | 5.8 | 145 | 12.8 | 0.82 |
| 6 | 1999/06/15 | 18.13 | −97.54 | 60 | 6.4 | 6.9 | 225 | 11.6 | 1.84 |
| 7 | 2009/05/22 | 18.10 | −98.43 | 46 | 5.8 | 5.6 | 160 | 8.6 | 0.66 |
| 8 | 1999/09/30 | 16.00 | −97.02 | 47 | 6.5 | 7.4 | 433 | 7.8 | 2.32 |
| 9 | 1994/12/10 | 17.98 | −100.52 | 50 | 6.5 | 6.4 | 212 | 5.8 | 0.91 |
| 10 | 1997/01/11 | 18.34 | −102.58 | 40 | 6.5 | 7.1 | 378 | 5.1 | 1.99 |

*The intraslab earthquake of 28 August 1973 (M_w 7.0, R = 311 km) is not listed because it was not recorded at CU, probably due to instrumental malfunction. The estimated A_{\max} is 9.3 gal (Singh et al., 2013). Local earthquakes are excluded.

[†] $A_{\max} = [(A_n^2 + A_e^2)/2]^{1/2}$; $V_{\max} = [(V_n^2 + V_e^2)/2]^{1/2}$

2017/09/19 $H \sim 51$ km $R = 133$ km $A_{\max} = 59$ cm/s² $V_{\max} = 8.9$ cm/s

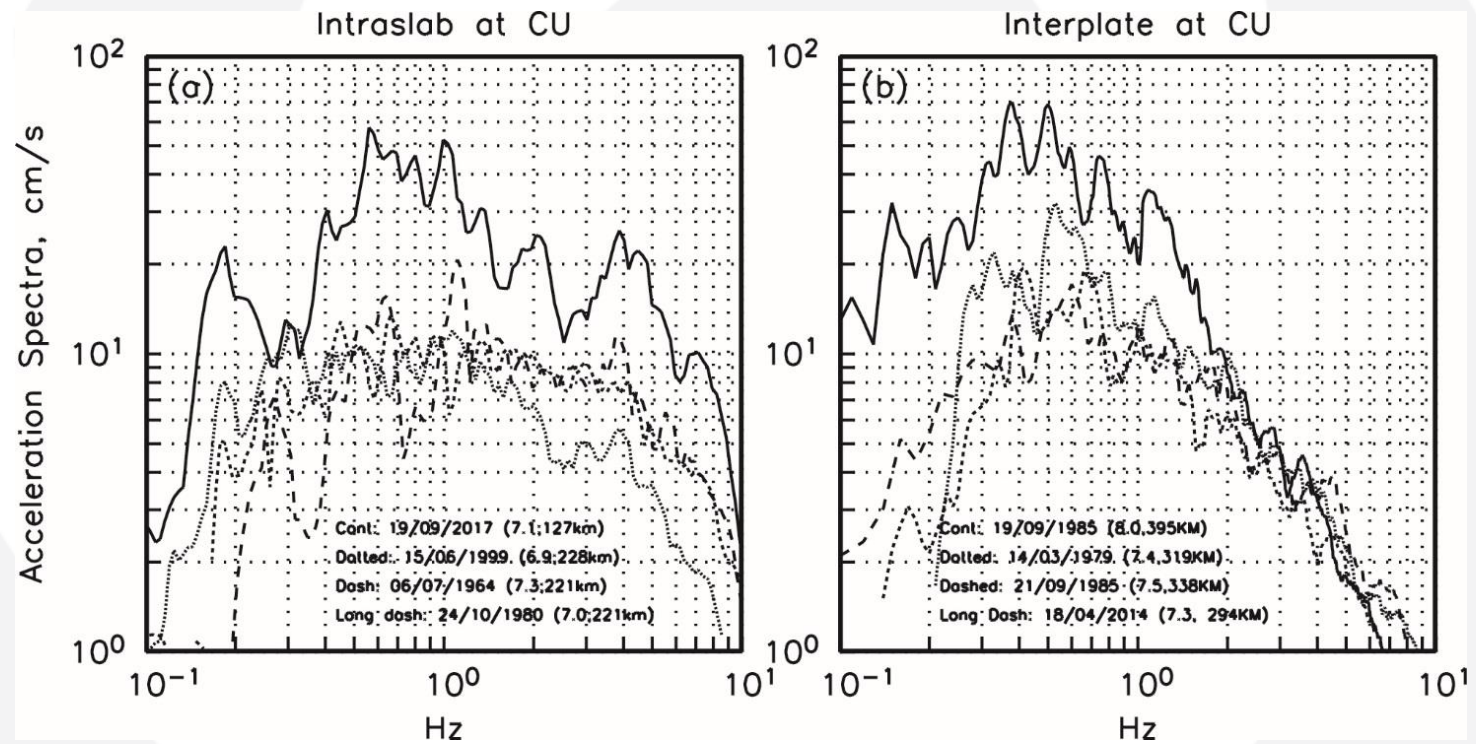

Singh et al., 2014

Sismos Intraslab vs Interplaca

| | Intraslab | Interplaca |
|----------------|---------------|-----------------|
| H | ≥ 40 km | $\sim 15-25$ km |
| $\Delta\sigma$ | 30 Mpa | 7 Mpa |
| R a CU | ≥ 120 km | ≥ 300 km |

19 Sep 2017, CU, NS

Fourier Spectra at CU, NS

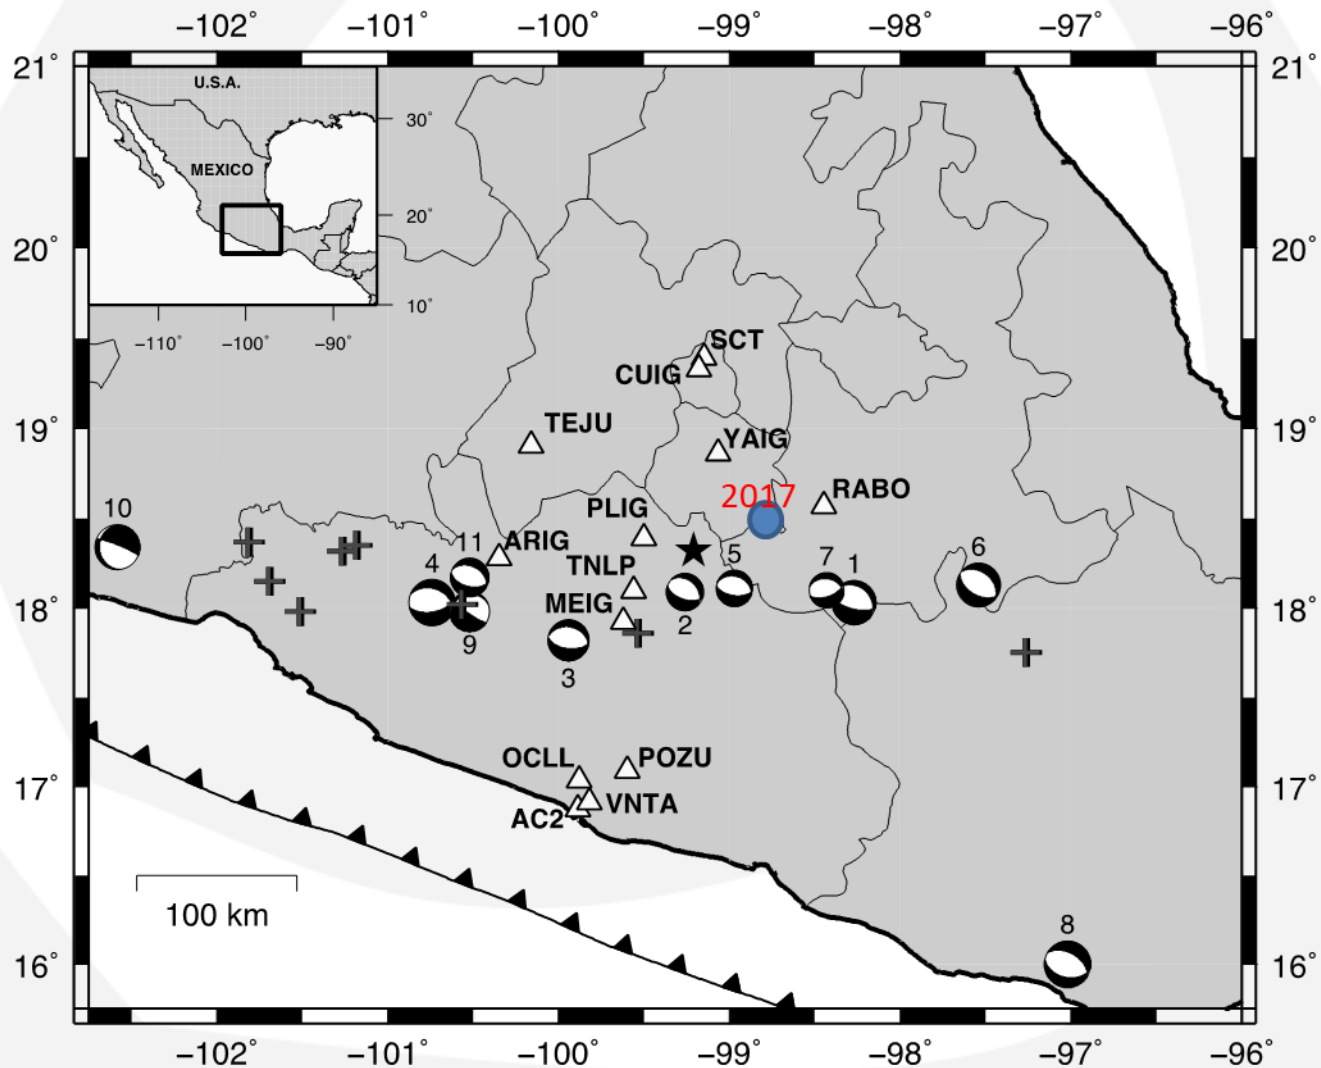

Response Spectra at CU, NS

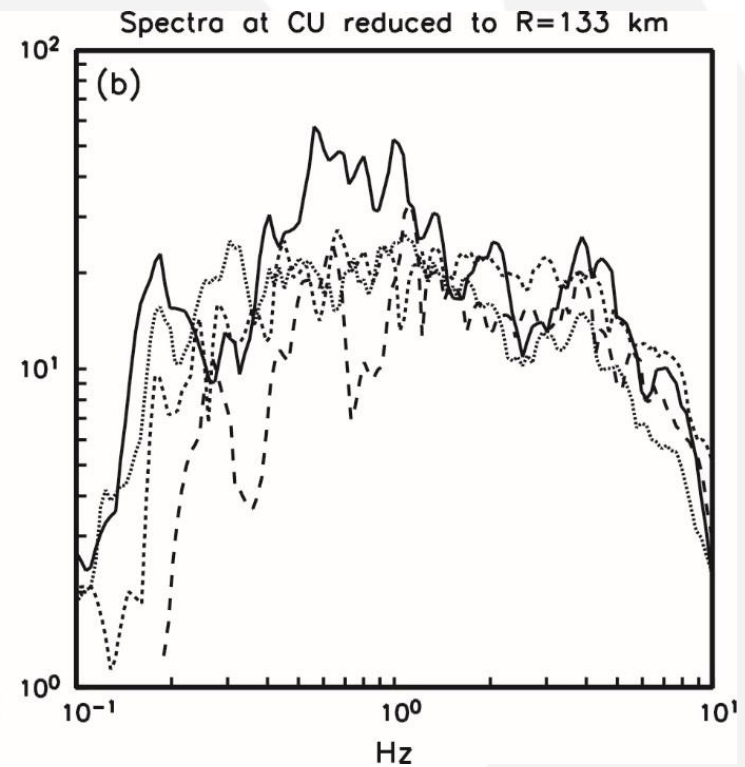

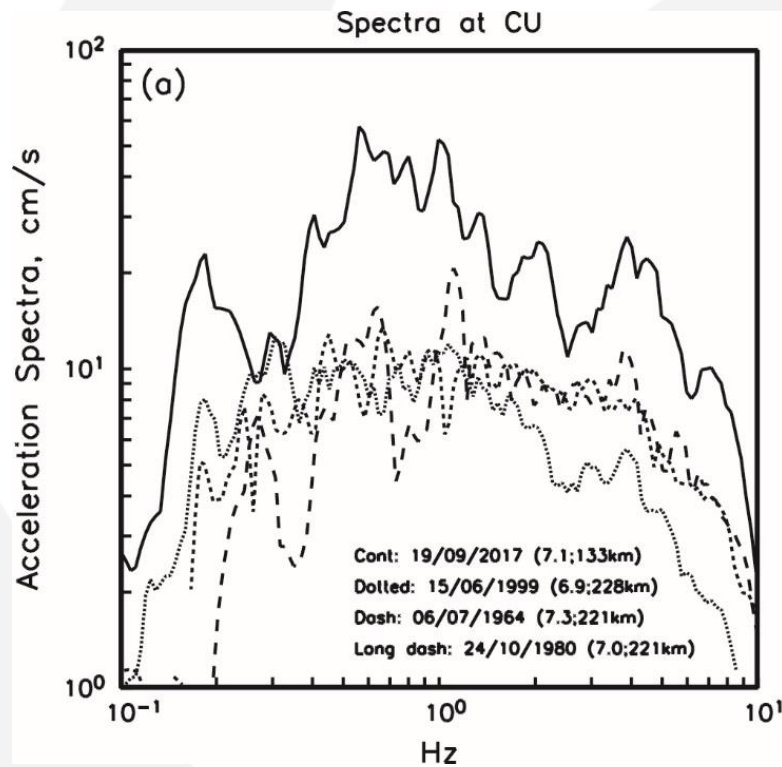

¿Mw, R esperado?

¿Sismo Anómalamente energético?

Mw7.1, R=127 km

Prediction of ground motion at CU for Mw7 intraslab earthquake at 150 km.

EGF: 21/07/2000, Mw5.8

Modified from Iglesias et al., 2002

Chiapas Mw8.2 intraslab earthquake

Nearly vertical normal fault, severing the subducting Cocos plate

Large slip (upto 15 m) about 60 km from the hypocenter

Directivity towards Salina Cruz (probably the cause of damage in Juchitan area)

Large number of aftershocks

Can similar large intraslab earthquake occur near the coast elsewhere along the Mexican subduction zone?

Implication for Tehuantepec seismic gap? Strongly or weakly coupled interface?

Morelos-Puebla Mw7.1 intraslab earthquake

Mw and R expected (more or less)

Largest PGA at CU (twice that recorded in 1985)

At CU the earthquake seems unusually energetic ($0.4 < f < 1.0$), Directivity? (No clear evidence from modelling), $E_r/M_o \sim 1.3 \times 10^{-5}$ is not unusual

Fourier spectra of intraslab and interplate earthquakes at CU differ and, hence, also the damage pattern in Mexico City

How close to Mexico City can such earthquakes occur?

Gracias
